

CONTENTS – Regular Papers

Control, Informatics and Robotics

New PCA-based scheme for process fault detection and identification. Application to the Tennessee Eastman process

Mohamed Guerfel, Anissa Ben Aicha, Kamel Belkhiria, Hassani Messaoud

Robust fault-tolerant control with dynamic event-triggered mechanism based on observer for nonlinear switched systems

Xiaohan Wang, Xingjian Fu

A high-accuracy Stewart–lift platform based on a programmable logic controller – comparative case studies

Dawid Pawuś, Michał Witek, Łukasz Klar, Krzysztof Bochenek

Dropping or marking: a review and evaluation of existing fluid-flow approximation models

Monika Nycz, Tomasz Nycz, Tadeusz Czachórski

Novel temperature-effective modeling and state of charge estimation based on sigma-point Kalman filter for lithium titanate oxide battery

Yusuf Muratoğlu, Alkan Alkaya

$M^X/G/1/\infty$ single-server queueing system with random volume customers and multiple vacations

Oleg Tikhonenko, Marcin Ziółkowski

Secure system with security protocol for interactions in healthcare Internet of Things

Sabina Szymoniak

Static anti-windup compensator based on BMI optimisation for discrete-time systems with directional change in controls avoidance

Dariusz Horla

Exponential decay of transient values in positive nonlinear systems

Tadeusz Kaczorek

Mechanical and Aeronautical Engineering, Thermodynamics

Optimized design of truck cab lightweighting based on sensitivity hierarchical comparative analysis method

Yiqun Wang, Di Li, Dongze Wu, Yukuan Li, Tao Wang, Xiaokun Wang, Shaoxun Liu

Innovative design of experimental blade cascades model for in-depth analysis of stall flutter

Pavel Šnábl, Chandra Shekhar Prasad, Pavel Procházka, Ludek Pešek, Václav Uruba, Vladislav Skála

The effect of the coating process thermal cycle on mechanical properties of AA6061-T6 used for load-carrying elements of a space instrument: a case study

Tomasz Barciński, Robert Kosturek, Tomasz Kowalski, Maciej Bzowski, Roman Wawrzaszek, Karol Mostowy, Jędrzej Baran, Maciej Daukso

Failure analysis of fibre metal laminate channel section column under axial compressive pulse loading

Monika Zaczynska

Artificial and Computational Intelligence

Fault type and fault location detection in transmission lines with 6-convolutional layered CNN

Bilal Gümüş, Heybet Kılıç, Cem Haydaroglu, Ulvi Yusuf Butakin

Leveraging active learning techniques for surgical instrument recognition and localization

Bartłomiej Piotrowski, Jakub Oszczak, Krzysztof Sawicki, Barbara Siemiątkowska, Andrea Curatolo

HTTNet: hybrid transformer-based approaches for trajectory prediction

Xianlei Ge, Xiaobo Sen, Xuanxin Zhou, Xiaoyan Li

Material Science and Nanotechnology

Investigating the effect of electrospark alloying parameters on structure formation of modified nitrogen coatings

Oksana Haponova, Viacheslav Tarelnyk, Tomasz Mościcki, Nataliia Tarelnyk

The ITO thin films deposited by magnetron sputtering for solar cell applications

Marek Szindler, Magdalena M. Szindler, Krzysztof Lukaszkowicz, Krzysztof Matus, Natalia Nosidlak, Janusz Jaglarz, Mateusz Fijalkowski, Paweł Nuckowski

Electronics, Telecommunication and Optoelectronics

Performance evaluation of 5G New Radio low-density parity check codes over different scenarios of lognormal fading channel

Mohammed Hussein Ali, Ghanim A. Al-Rubaye

Power Systems and Power Electronics

Experimental evaluation of low-voltage DC/DC boost converters for renewable energy applications

Jakub Dawidziuk, Michał Harasimczuk, Rafał Kopacz
